An organic light-emitting diode (OLED or organic LED), also known as organic electroluminescent (organic EL) diode, is a light-emitting diode (LED) in which the emissive electroluminescent layer is a film of organic compound that emits light in response to an electric current. This organic layer is situated between two electrodes; typically, at least one of these electrodes is transparent.

Anaerobic digestion is a sequence of processes by which microorganisms break down biodegradable material in the absence of oxygen. The process is used for industrial or domestic purposes to manage waste or to produce fuels. Much of the fermentation used industrially to produce food and drink products, as well as home fermentation, uses anaerobic digestion.

As a result, problems related to disposal of these organic solid  
wastes have become more pronounced in recent years. This is  
mainly due to the rapid pace of development towards worldwide  
modernization as changes in style of life. Most of the organic  
solid wastes are composed of agricultural waste, household food  
waste, human and animal wastes, etc.

Many problems, viz. the risks of “tampering with Mother Nature”,  
the health concerns that consumers should be aware of and the  
benefits of recombinant technology, also arise with pest-  
resistant and herbicide-resistant plants. The evolution of  
resistant pests and weeds termed superbugs and super weeds is  
another problem. Resistance can evolve whenever selective  
pressure is strong enough. If ...
