### Rcn Drug Calculations Test

Undertaking drug calculations for intravenous medicines and infusions. Drug calculations for intravenous (IV) medicines and infusions are more complex than those...

**drug calculations | RCNI**  
If we divide 42 drops per minute by 20 drops per millilitre, we'll find out how many millilitres per minute.  $42/20 = 2.1$  ml per minute. Now we can divide the overall infusion of 100ml by the millilitres transfused per minute to get our answer:  $100 \text{ ml} / 2.1 \text{ ml per minute} = 47.6$  minutes.

It is an extract from the Nursing Times learning unit Drug Calculations in Practice, which includes clinical scenarios to test your calculations. Citation: Wright K, Shepherd E (2017) How to calculate drug doses and infusion rates accurately.

### How to calculate drug doses and infusion rates accurately ...

Using the WIG equation:  $30 \times 50 / 250 = 6\text{ml}$ . Therefore the calculation shows that, to give 30mg per hour, the infusion pump rate would need to be set at 6ml per hour. This calculation is straightforward when the rate you want (30mg/hour) and the amount of the drug in the bag (250mg) are both in the same units (mg).
